## USG BILATERAL EYES

Ill defined Heterogeneous soft tissue mass is noted in vitreous chamber of left eye with internal calcific foci within ? retinoblastoma . Choroidal thickening is noted . Left lens appears thickened .

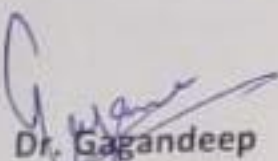

Right anterior chamber is anechoic and normal.

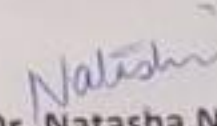

Right lens shows normal position and echogenicity and thickness.

Right posterior chamber is anechoic and normal.

Right optic nerve is normal in echogenicity and thickness .

ADVICE : CT & MRI correlation for confirmation and further evaluation

| PATIENT'S NAME: PRINCE CHOPAL        | AGE/SEX: 2/M            |
| REF. BY: DR. AIIMS                   | REG. ID: PEL1306        |
| TEST NAME: 3T MRI SCAN - CEMRI ORBIT | EXAM. DATE: 01-JUL-2022 |

**CEMRI ORBITS**

**Technique:** MR imaging of the orbits was performed and high resolution T1-and T2-weighted serial sections obtained in the sagittal, coronal and axial planes on a 3.0 Tesla scanner. Post contrast images were acquired in sagittal, axial and coronal planes.

**Clinical details:** Vision difficulty left eye,

**Findings:**

There is evidence of intra ocular altered signal intensity heterogeneously enhancing mass lesion is seen in the posterior chamber of the left eye ball measuring approx. 15 x 14 mm in size. There is associated vitreous hemorrhage is seen. No definite evidence of extraocular extension is seen. The lesion shows hypointensity on T2 / FLAIR and isointensity on T1W images.

Right orbits and their contents including the optic nerve, extraocular muscles, and retro-orbital fat are unremarkable.

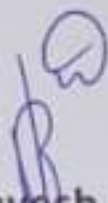

Left optic nerve, extraocular muscles, and retro-orbital fat are unremarkable.

The optic chiasm too is unremarkable.

No mass lesion is seen on right side.

**OPINION:** - CEMR finding reveal intra ocular altered signal intensity heterogeneously enhancing mass lesion in the posterior chamber of the left eye ball with associated vitreous hemorrhage – likely retinoblastoma.

Please correlate clinically.

# Histopathology Report

## Ocular Pathology

Dr. Rajendra Prasad Centre for Ophthalmic Sciences  
All India Institute of Medical Sciences

Ansari Nagar, New Delhi - 110029, India

Name of the Patient: Prince Chopal

Lab Reference No. : 22-795

Age : 2 Years Sex : Male

Received on : 18/7/2022

UHID No. : 106058668

Date of Report : 27/7/2022

Ward IB

Bed No. : 139

Unit Incharge : Prof. Bajaj.

Nature of the Material Enucleation.  
Submitted :

Report :  
- Enucleated left eye ball.  
- Poorly differentiated retinoblastoma, left side.  
- The tumour is infiltrating the optic nerve head (post laminar) and choroid extensively.  
- Rest of the ocular structures including iris, ciliary body and resected margin of optic nerve are free of tumour.
